What are prime numbers, and how do I identify them?

Prime numbers are numbers greater than 1 that have no divisors other than 1 and themselves. To identify them, check if the number can only be divided evenly by 1 and itself without a remainder.

How do I simplify fractions?

To simplify a fraction, find the greatest common divisor (GCD) of the numerator and denominator and divide both by that number. Repeat if necessary until the fraction is in its simplest form.

What is the order of operations in basic math?

The order of operations is Parentheses, Exponents, Multiplication and Division (from left to right), Addition and Subtraction (from left to right). Remembered by the acronym PEMDAS.

How do I solve basic linear equations?

To solve a linear equation, isolate the variable on one side of the equation by performing inverse operations, such as adding/subtracting or multiplying/dividing both sides equally.

What is a ratio, and how is it different from a fraction?

A ratio compares two quantities and shows how many times one value contains another. While both are written with a colon (e.g., 3:4), a ratio compares quantities, whereas a fraction shows part of a whole.
