Solutions often involve setting derivatives to zero or utilizing graphical methods to identify profit-maximizing points, emphasizing the role of elasticity and market structure.
- 3. Market Structures and Strategic Behavior** Problems addressing perfect competition, monopoly, oligopoly, and monopolistic competition are prevalent. Solutions explore how firms make strategic decisions, set prices, and respond to competitors. Game theory applications, such as Nash equilibrium calculations, are also covered, providing insight into strategic interactions.

Analytical Highlights of Selected Problem Solutions

To contextualize the educational value, let's examine some representative solutions:

- Cost Minimization under Constraints** A typical problem involves a firm choosing input levels to minimize costs given a production target. The solution employs Lagrangian methods, setting up the cost function with constraints, deriving first-order conditions, and analyzing the resulting optimal input bundle. Graphical illustrations of isoquants and isocost lines reinforce understanding.
- Price Elasticity and Revenue Optimization** Problems often require calculating price elasticity of demand and determining optimal pricing. Solutions demonstrate how to derive elasticity from demand functions, then apply the revenue maximization rule—setting marginal revenue to zero—to find the optimal price point. Sensitivity analysis reveals how changes in elasticity affect revenue.
- Game Theory Applications** in

Oligopoly Some solutions analyze duopoly scenarios using the Cournot or Bertrand models. They involve setting reaction functions, solving for equilibrium quantities or prices, and interpreting strategic incentives. These solutions elucidate the impact of strategic interdependence on market outcomes.
